

Vibelets Feature Points 28/7

Multi-Account Integration and Tracking – Features and Differentiators

Unified account management: Vibelets allows you to connect and manage unlimited ad accounts from different platforms (Facebook, Bigo, TikTok, etc.) in one unified dashboard—with a single login.

[Like Meta, Tiktok, all native platform has one brain]

Effortless multi-account setup: A team admin can add or integrate multiple ad accounts by simply connecting each platform via their credentials and granting permission. The setup takes less than 2 minutes per account.

Onboarding made simple: Integration is a guided 3-step process:

1. Choose the platform (Meta, Google, TikTok)
2. Sign in and authorize access
3. Assign accounts to teams or categories

No dev help needed—zero code, zero friction.

BM token explained simply: To integrate your Facebook ad accounts, Vibelets requires a Business Manager (BM) token. Think of it like a digital key—Facebook gives this token to confirm that you have permission to manage the accounts. It's secure, easy, and takes less than a minute to generate.

How It Works?

1

Connect Ad Accounts

Meta, TikTok

2

Vibelets Analyzes Performance

And creative efficiency

3

You Kill Waste, Scale ROI

And vibe responsibly

Vibe, Don't Guess

Tracker

First-party data tracking: The tracker uses first-party data to track conversions, pageviews, clicks, scroll depth, etc.—ensuring data accuracy despite cookie restrictions or iOS tracking limits.

No separate pixel installations: Once accounts are connected, tracking is auto-enabled. No need to manually install new pixels on landing pages or websites for each campaign.

Unified event view: All user events, conversions, and performance signals are visible in one real-time dashboard—across all platforms and accounts.

Feature/Capability Highlights

Client account onboarding: Agencies or media teams can onboard multiple client ad accounts instantly—ideal for scale.

Role-based access: Admins can assign teammates custom access—view-only, editor, or full control. Great for internal teams, freelancers, or brand partners.

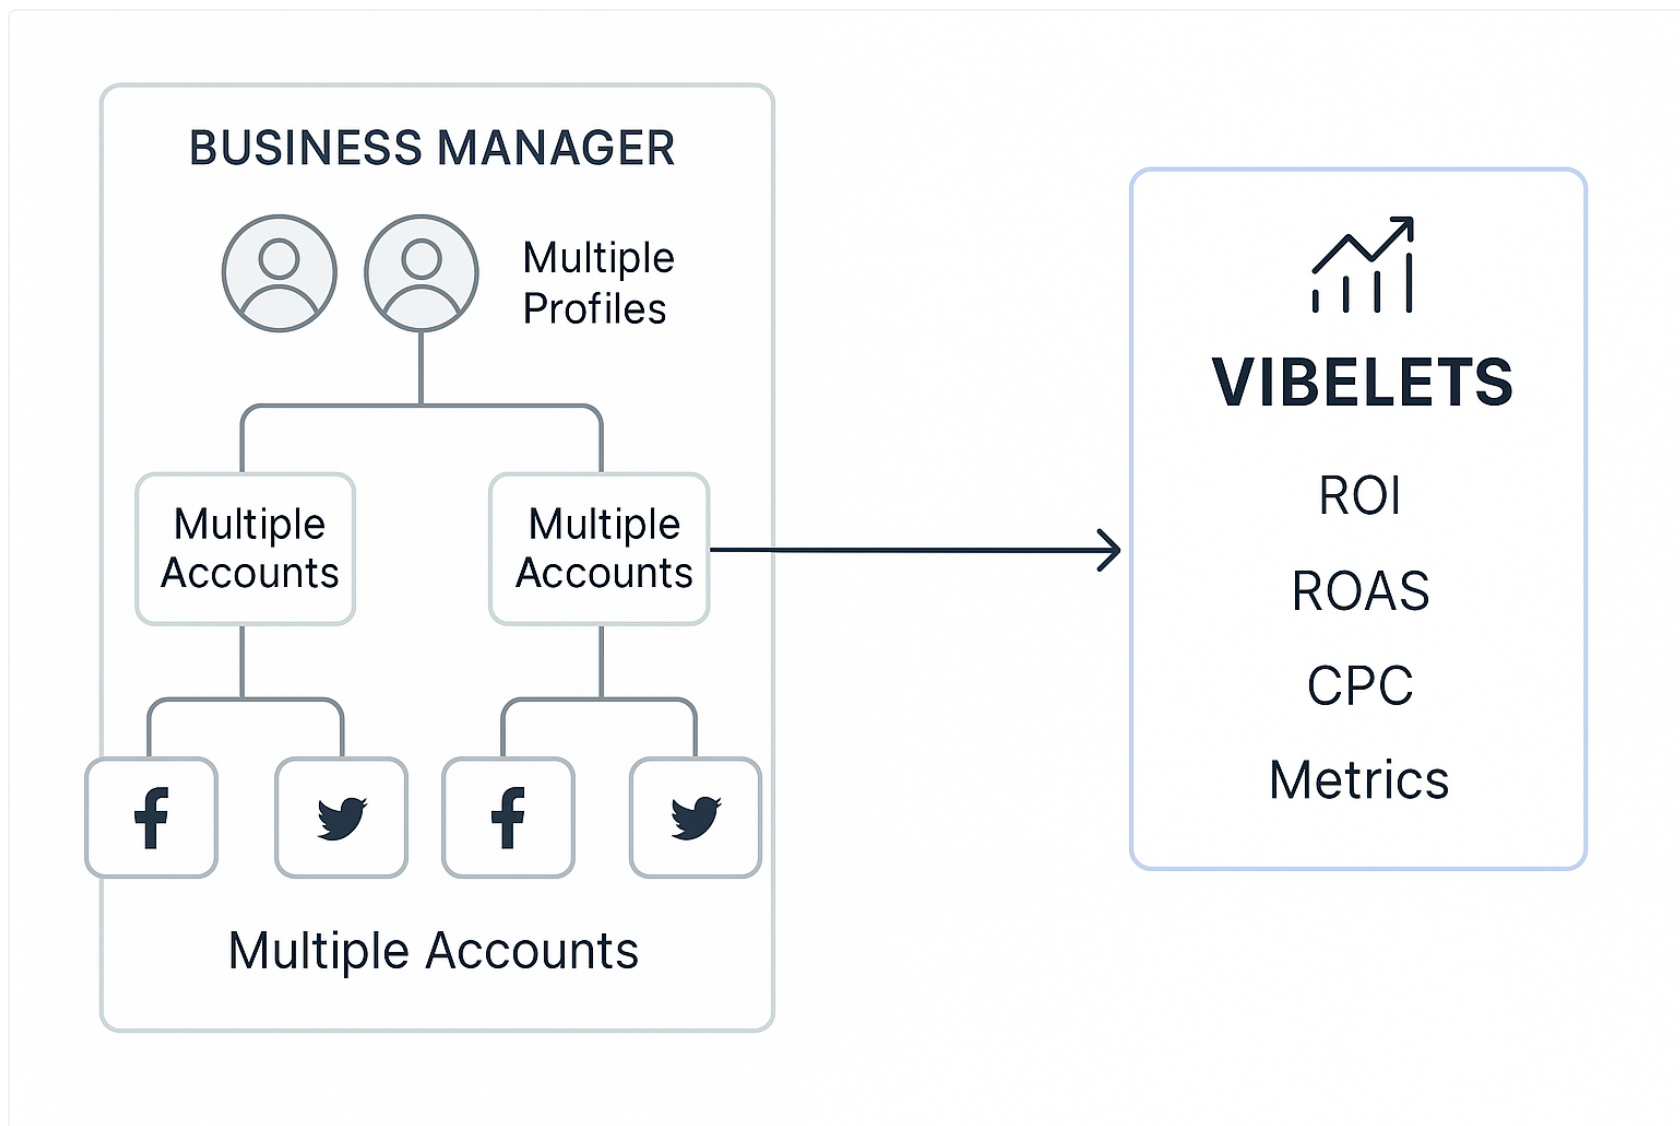

Account tagging: Organize accounts by brand, region, media buyer, or vertical using custom tags for quick filtering.

Performance-focused optimization: Vibelets doesn't just track ROI—it boosts it. The platform auto-analyzes key metrics like ROAS, CPC, CPA, CTR, CVR and:

- Sends alerts when something underperforms
- Highlights top creative combinations
- Suggests A/B tests and creative refreshes
- Lets you scale what's working—faster
- Replaces manual ops with AI-led suggestions

End-to-end visibility: From creative ideation to ad launch, script generation to A/B testing, and metric tracking to real-time alerts—it's all in one place. Like having a strategist, analyst, and media buyer in one tool.

All-in-one reporting: Ditch the spreadsheets. Vibelets provides full-funnel reporting across platforms, segmented by campaign, creative, offer, and performance. Accessible via dashboard or export.

Differentiation Points

No account limits: Unlike Facebook BM's restrictive limits, Vibelets lets you integrate unlimited accounts, regardless of ad spend or verification status.

One workspace, many accounts: Stop juggling multiple Business Managers. With Vibelets, every client and ad account lives in one organized system—perfect for scaling.

Agency-native design: Built for agencies, media teams, and performance marketers:

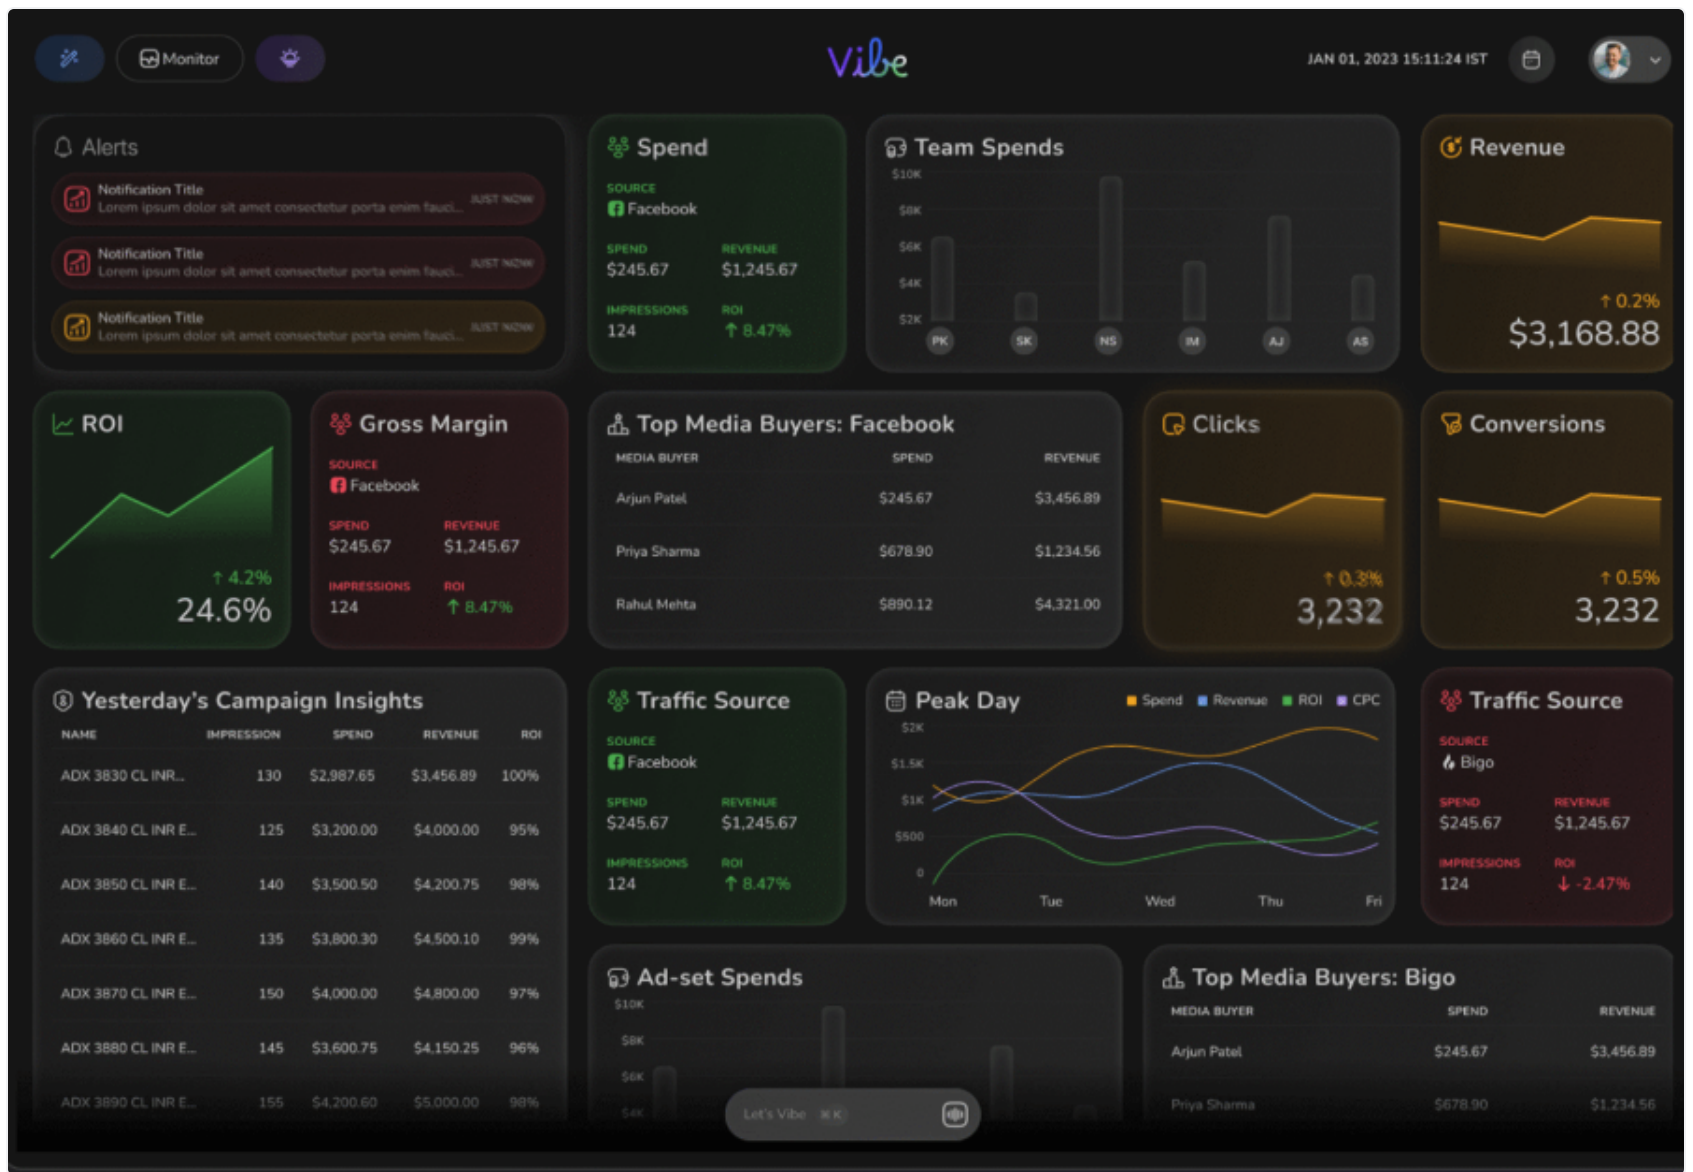

- Manage 10–100+ accounts easily
- Collaborate across clients or verticals
- Assign roles, track performance, automate ops

Use cases:

- **Performance agencies** managing multiple clients
- **In-house marketing teams** scaling across platforms
- **Freelancers/consultants** managing client campaigns
- **Creators/media buyers** who want faster testing, better insights, and fewer tools

Streamlined workflow: Bulk import, tag, optimize, and track—all from a single login. No switching tabs. No hiring more ops folks just to monitor campaigns.

Vibelets brings order to chaos—and vibe to your marketing.

Vibelets Optimization Flow

Built for Media Buyers Who Want More Signal, Less Guesswork

Real-Time Campaign Analysis

Let's say you're a media buyer who launched **15 campaigns yesterday**.

The next day, instead of opening 7 tabs and checking each account manually, you just open **Vibelets**.

With **one click**, you get a complete optimization snapshot:

- **Performance Summary:**
 - 10 campaigns are scaling
 - 8 campaigns should be paused
 - 5 campaigns are draining spend → budget needs to be reduced
- **Metric Breakdown (by Campaign):**
 - ROAS
 - CPC
 - CTR
 - CVR

- Spend vs. Revenue
 - Vibelets even highlights **what's underperforming and why**
-

What Happens Next?

1. Insight → Observation → Actionable Suggestions

- Vibelets doesn't just show metrics.
- It gives context:

"Campaign A has a high CTR but a poor CVR — likely poor landing page fit."

"Campaign C is burning budget after 2PM — suggest dayparting."

2. One-Click Actions

- Want to pause all underperforming campaigns? 1 click.
 - Want to reduce budget by 20% on weak ad sets? 1 click.
 - Want to scale top performers? Vibelets suggests the % based on ROI trend.
-

Cloning & Scaling – Instantly

Want to clone a winning campaign?

- Vibelets asks:

"How many clones do you want?"

*You type **3**, it builds **3 exact copies**, ready to go.*

No duplicating manually. No switching tabs.

Smart Alerts

Vibelets tracks all critical signals 24/7 and alerts you when:

- A metric drops below your threshold (e.g. ROAS < 2.0)
- CPC spikes on a specific ad set
- Spend exceeds your daily cap without conversions

You don't need to babysit dashboards — Vibelets **nudges you before money burns**.

Ask Anything – Chat with Your Dashboard

Got questions? Just ask the built-in chat assistant:

- "What metric is killing Campaign B's ROAS?"
- "Which campaign has the highest CPC today?"
- "What should I optimize first?"
- "Which ad set needs a creative refresh?"

You get answers instantly — no analyst needed.

Summary:

Vibelets is your **AI campaign ops assistant** that gives you:

- Campaign status + action plan in one click
- Auto-generated insights + smart budget suggestions
- One-click play/pause/scale/clone
- Metric-specific alerts & AI chat guidance
- All in one clean, fast dashboard

No more tab-hopping. No more gut-feel. Just clarity, speed, and better margins.

How To Do Creative Planning – Powered by Vibelets

With Vibelets, creative planning becomes a seamless, AI-assisted process that takes you from **Research** → **Planning** → **Ideation** → **Creation** in just a few steps. Here's how Vibelets simplifies and enhances each phase:

Research: Uncover Winning Trends and Insights

- **Key Benefit:** Vibelets helps you **identify trends, angles, and hooks** that are already performing well in the market. This gives you a **data-backed** foundation to build your creatives.
 - **Insight:** By analyzing **millions of ads** across multiple platforms, you can make **informed decisions** on what's resonating with your audience.
-

Plan: Organize Creative Briefs and Strategy

- **Key Benefit:** Vibelets helps you structure your **creative briefs, ad types**, and overall **strategy** efficiently.
 - **Insight:** Clear planning saves you **time and effort**, and ensures that your creatives align with your **campaign objectives**.
-

Ideate: Generate High-Converting Hooks, Scripts, and Voiceovers

- **Key Benefit:** With Vibelets, you can **generate hooks, scripts**, and even **voiceovers** based on proven data to resonate with your audience.
 - **Insight:** By leveraging AI-driven suggestions, you can **skip the guesswork** and create messaging that's designed for maximum impact.
-

Create: Produce Static or Video Creatives

Vibelets empowers you to create both **static images** and **videos** in multiple styles:

- **UGC** (User-Generated Content)
- **B-roll**
- **POV** (Point of View)
- **Animated**
- **Key Benefit:** Vibelets helps you create **high-performing creatives** that can be **tailored** to your specific campaign needs — from **brand videos** to **user-generated content**.
- **Insight:** Whether it's a product demo or a customer testimonial, **the right format** can drive **higher engagement**.

Creative Generation Flow – Powered by Vibelets

Vibelets simplifies the creative process into clear, actionable steps:

1. Step 1: Choose Your Creative Type

- **Options:** Static Image | Video

2. Step 2: Chatbot Prompt

- The chatbot will ask: “What type of video would you like to create?”
- **Choose:** 1st Person | 2nd Person | 3rd Person Narrative
- **Example:** Eco-friendly tone (e.g., ‘Green’ concept)

3. Step 3: Select Style

- **Choose From:**
 - UGC (User-Generated Content)
 - Actor-based (real shoot)
 - POV (Point of View)
 - Animated
 - B-roll / Stock-based
 - Surprise Me (AI selects best-fit style)

4. Step 4: Scripting

- **AI Options:** New Script | Existing Script | Custom Script
- **Edit:** Refine your script to align with your messaging

5. Step 5: Voiceover & Storyboard

- **Choose Voiceover Type:** Select from a variety of styles
- **AI-generated Storyboard:** Based on script and tone
- **Edit:** Adjust scenes, sequence, or visuals from the asset library

6. Step 6: Finalization

- **Once Approved:**
 - Add to **Campaign Library**
 - Assign to **Ad Set**
 - Schedule Launch or **Export**

Key Takeaways:

- **Efficient:** Streamline the creative process from **research** to **launch**.
- **AI-Driven:** Benefit from **real-time insights** and AI-powered suggestions that optimize each step.
- **Data-Backed:** Make decisions based on **proven trends**, not guesses.

🔗 **Scalable:** Easily **manage multiple creatives** and campaign assets all in one place.

Vibelets gives you everything you need to create high-converting ads faster and smarter. Ready to take your campaigns to the next level? **Join the Vibelets waitlist** today!
